

Solutions for IBM Rational DOORS®

Generate Word documents or PDFs from DOORS® modules using the fast document generator.

 **MANY NEW FEATURES**

IBM Rational DOORS® is one of the most important applications for state-of-the-art requirements management for systems and professional IT applications. *requisis_DoX* can generate convenient Word files or PDFs from DOORS® modules in next to no time. You do not have to interrupt your work as the clipboard is not in use.

THE SOLUTION

requisis_DoX is a tried and tested document generator that can generate Word or PDF files from DOORS® modules. You can use Word templates to automatically create documents with your company's corporate design. Thanks to its unique technology, data does not need to be temporarily stored on the clipboard, meaning that you can continue working on your PC during the export process. New change comparison and attribute presentation features make this solution even more convenient.

requisis_DoX has a speed-optimized export routine so that data export takes 50 percent less time than usual. For large documents, it is even faster than other

applications because it runs at a consistent speed and, unlike other exporter applications, does not run more slowly for larger documents.

requisis_DoX of course also offers standard functions such as editable template files, style sheets for uniform output of text and tables, tables of contents, automatically generated cover sheets, etc. Versatile layout options can be used to individualize the design. Special DOORS® characters are natively supported.

requisis_DoX saves you time and protects your investment because you can call it up from your own DXL extensions and integrate its functions into processes and existing DOORS® extensions.

requisis_DoX

AREAS OF APPLICATION

- > Export of DOORS® modules
Word or PDF
- > Printout of performance/requirements
specifications
- > Generation of change documentation
- > Revision-proof archiving of DOORS® data

FEATURES AND ADVANTAGES

- > Fast export – the computer is not blocked
during export
- > The clipboard can still be used during export
- > Lossless, complete export
- > Time savings due to simple configuration
- > Revision security: complete archiving of the performance specifications
- > All special characters are exported
- > Module properties are transferred to document
properties, header/footer, cover sheet, etc.
- > Selection of the view and of the baseline to be
exported
- > Automatic change documentation
- > Export in book format or as a table, as well as many
other mixed formats
- > Customizable Word templates
- > Post-processing macros
- > API integration with your own DOORS® extensions

NEW FEATURES

- > Export of several modules to Word document or a
PDF/A file
- > Diverse layout options
- > Change comparison as comparison suitable for
management or as a detailed comparison with
redlining view
- > OLE object comparison based on view
- > New attribute presentation options
 - As a list below the requirement
 - As a single column: all attributes in one column,
one below the other
 - As individual columns: one column per attribute
- > The output format can be configured at the
object level

requisis *Outstanding in Engineering*

REQUISIS organizes requirements management for complex software-intensive systems and develops customized software solutions. Our main focus is on requirements engineering based on the leading requirements management platform, IBM Rational DOORS®, and its extension language DXL. We are also happy to help you optimize your processes. Effective training sessions complete our range of services.
